From the ancient Greeks to the present day, Rutherford explores how science has shaped our beliefs, our societies, and our very sense of ourselves.

Rutherford begins his book with the Big Bang, the moment when the universe began. He then follows the development of science through the ancient world, the Middle Ages, and the Renaissance.

In the 17th century, the scientific revolution transformed our understanding of the universe. Scientists such as Galileo, Kepler, and Newton developed

new theories that explained the laws of motion, the structure of the solar system, and the nature of gravity.

In the 18th and 19th centuries, science continued to advance rapidly. Scientists such as Charles Darwin, James Clerk Maxwell, and Marie Curie made groundbreaking discoveries that changed our understanding of biology, physics, and chemistry.

In the 20th century, science reached new heights. Scientists developed new technologies, such as the computer, the nuclear bomb, and the laser. They also made important discoveries in fields such as genetics, cosmology, and particle physics.

Rutherford concludes his book by reflecting on the impact of science on modern Britain. He argues that science has played a key role in shaping our society and our culture.

From The Big Bang To Modern Britain In Science And Myth is a fascinating and informative book that provides a comprehensive overview of the history of science. Rutherford's writing is clear and engaging, and he does an excellent job of explaining complex scientific concepts in a way that is accessible to general readers.

Key Themes

From The Big Bang To Modern Britain In Science And Myth explores a number of key themes, including:

*

- The role of science in shaping our understanding of the world

- The relationship between science and myth
- The impact of science on society and culture
- The future of science

Reviews

From The Big Bang To Modern Britain In Science And Myth has received positive reviews from critics.

The Guardian called the book "a brilliant and passionate account of the history of science." *The New York Times* said that the book is "a must-read for anyone who wants to understand the role of science in our world." *The Washington Post* called the book "a tour de force that will leave you in awe of the human mind."

Author

Adam Rutherford is a British geneticist, science writer, and broadcaster. He is the author of several books, including *Creation*, *The Book of Humans*, and *How to Argue with a Racist*.

Rutherford is a Fellow of the Royal Society and a member of the Royal Institution. He is also a regular contributor to *The Guardian* and *The New Scientist*.

From The Big Bang To Modern Britain In Science And Myth is a must-read for anyone who wants to understand the role of science in our world. Rutherford's writing is clear and engaging, and he does an excellent job of explaining complex scientific concepts in a way that is accessible to general readers.
