

From the Big Bang to Just Now: Quick Histories of the Universe, Earth, Life, Human Beings, and Our Place in It All

In his book *From the Big Bang to Just Now: A Cosmic Journey*, Cody Cassidy takes readers on a sweeping tour of the history of the universe, Earth, life, human beings, and our place in it all. Cassidy writes with clarity and passion, and he has a knack for making complex scientific concepts accessible to a general audience. The book is beautifully illustrated with diagrams, charts, and photographs, and it includes a helpful timeline of key events in the history of the cosmos.

Cassidy begins his book with the Big Bang, the cataclysmic event that created the universe about 13.8 billion years ago. He then traces the evolution of the universe from a hot, dense soup of particles to the vast, cold expanse that we see today. Cassidy also discusses the formation of stars and galaxies, and he explains how the elements that make up our bodies were forged in the hearts of stars.

A Quick History of the Universe: From the Big Bang to Just Now (Quick Histories) by Andrei Besedin

Next, Cassidy turns his attention to the history of Earth. He describes how our planet formed from a cloud of gas and dust about 4.6 billion years ago. He then traces the evolution of life on Earth, from the first single-celled organisms to the complex and diverse array of life that we see today. Cassidy also discusses the major extinctions that have occurred throughout Earth's history, and he explains how these extinctions have shaped the evolution of life.

Cassidy then turns his attention to the history of human beings. He describes how our species evolved from apes about 6 million years ago. He then traces the development of human culture, from the first stone tools to the modern world. Cassidy also discusses the major challenges that humanity faces today, such as climate change, overpopulation, and nuclear weapons.

Cassidy concludes his book by reflecting on our place in the universe. He argues that we are part of a vast cosmic story that began with the Big Bang and will continue long after we are gone. He also argues that we have a responsibility to care for our planet and for all of its inhabitants.

From the Big Bang to Just Now is a comprehensive, engaging, and beautifully written book that explores the history of the universe, Earth, life, human beings, and our place in it all. Cassidy writes with clarity and passion, and he has a knack for making complex scientific concepts accessible to a general audience. The book is a must-read for anyone who is interested in the history of the cosmos and our place in it.

About the Author

Cody Cassidy is an astrophysicist and science writer. He has written for *Scientific American*, *The New York Times*, and *National Geographic*. Cassidy is also the author of the book *The Science of Star Wars*.

Reviews

"From the Big Bang to Just Now is a sweeping and ambitious book that tells the story of the universe, Earth, life, and human beings in a clear and engaging way. Cassidy is a gifted writer who has a knack for making complex scientific concepts accessible to a general audience. This book is a must-read for anyone who is interested in the history of the cosmos and our place in it."

- **Sean Carroll**, author of *The Big Picture*

"Cody Cassidy has written a masterful book that takes readers on a cosmic journey from the Big Bang to the present day. Cassidy's writing is clear, concise, and engaging, and he has a knack for making complex scientific concepts accessible to a general audience. This book is a must-read for anyone who wants to understand the history of the universe and our place in it."

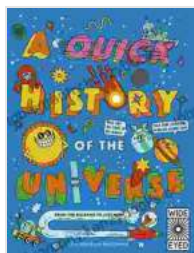

- **Neil deGrasse Tyson**, astrophysicist and author of *Astrophysics for People in a Hurry*

"From the Big Bang to Just Now is a beautifully written and deeply informative book that explores the history of the universe, Earth, life, and human beings. Cassidy's passion for science is evident on every page, and he has a gift for making complex concepts understandable. This book is a must-read for anyone who wants to learn more about the cosmos."

- **Bill Nye**, scientist, engineer, and television personality
